

About us.....

Lion Country Sawmills is a family owned and operated business conducted out of the farm shop in Madisonburg.

For 15 years, Ken Clouser had been the Pennsylvania sales representative for Timber Harvester bandsaws. Now that Timber Harvester is no longer producing mills, Ken has continued to provide parts, customer service, and NEW BANDSAWS under the name of Lion Country.

Very similar to the original TH models, you will find that the Lion Country lineup of bandsaws will function very well, even in daily use of production sawing operations.

Come see what we saw!

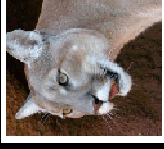

Our farm is located in central Pennsylvania, in the heart of Lion Country. We are 26 miles east of Penn State University, home of the Nittany Lions.

We are 5 miles east of the world famous Penns Cave.

We are only 10 miles south of the Lamar exit on Interstate 80.

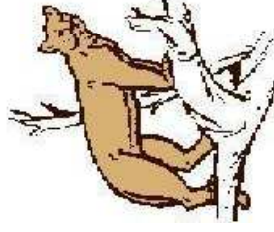

TO FIND US: From Route 192, take 445 north through the town of Madisonburg for one mile. Look for the Clouser Farm sign on the left.

From Route 64, take 445 south, winding 7 miles through the mountains. Look for the Clouser Farm sign on your left as soon as you leave the mountain range. If you drive through the town of Madisonburg, you've gone too far.

The Lion Country Lineup

We offer several models for you to choose from. Each model is designed for ease of construction, with durable materials and a proven sawing design used by past Timber Harvester bandsaws.

Although our mills are custom-made for each order, they also use many interchangeable parts, and we offer a full range of parts availability for replacing belts, bearings, and other wear points on your sawmill.

LYNX—Our smallest model, available on a ground track where the operator pushes the head through, or on a trailer package with a cable drive.

PUMA — Popular choice for most weekend users, with hydraulic raise/lower and forward/reverse, with hand clamps for holding the log.

COUGAR — Fully hydraulic mill, with log turner, power clamps, and log loader.

PANTHER — Our upright design for high-speed sawing that uses a carriage on a track to move the log while the head stays still. Have several good off-bearers standing by when sawing with this kitty cat!

Ground-mount LYNX

Puma saw head just about ready to mount on base frame. Note the removable plastic gas tank, and the cylinder lift. Saw head slides up and down on chrome-plated rods that hold the head in a very true position, and strong enough to take a variety of torque forces. Puma and Cougar models use a V-groove wheel, complete with wheel covers and track scrapers to keep interference from sawdust to a minimum.

The PUMA head shown here was built for a customer in South America. It is complete with a 38 hp Kohler engine. Our stock motor is a 28 hp, but this customer wanted to really cut fast, and through very large logs. We can retrofit any motor of your choice that we can get to fit the engine space provided.

We feature Prince brand hydraulic pumps and motors

Although we offer the models listed on the left, mills can be tailored to your specific needs. Diesel motors, electric motors, special requests for bandwheel and blade sizes, and multiple drives are all part of the options. Call us for a quote. Allow 6-8 weeks for completion of a mill.
